1. INTRODUCTION

The Masters programme in GIS and Remote Sensing offered by the Postgraduate Institute of Science of the University of Peradeniya seeks to provide a sound theoretical and practical knowledge and comprehensive training in the Geographic Information systems (GIS) and Remote Sensing (RS). The goal of this Masters programme is to provide opportunity for the participants, a critical understanding and competence in developing systems and tools for the acquisition, processing, transformation, analysis, storage, presentation and use of geo-spatial information. In addition, skills are developed to enable the participants to design and undertake research and development projects in various fields and also to actively engage in multidisciplinary research and development projects.

GIS and RS are rapidly evolving towards becoming standard tools, influencing everyday decision-making particularly among professionals. Even though this has been described as “Geoinformatics” by some of the professionals, the Postgraduate Institute of Science decided to name it as “GIS and Remote Sensing” due to its popularity. As a multi-disciplinary programme, it includes courses in Geographical Information System, Remote sensing, numerical methods and algorithms in RS and GIS, Digital photogrammetry, GPS and its applications, digital image processing etc. In addition, there are courses in application of GIS in various disciplines such as Earth Sciences, Land use planning, Disaster Management, Natural resources Management, Agriculture, Forestry, Wild life, Transportation and supply network, Transmission and Telecommunication network etc. are included. The programme is designed for the students to use computers throughout the programme, enabling them to use the latest software available in the fields of GIS and Remote Sensing.

The Board of Study in Earth Sciences has regularly updated the M.Sc. programme in GIS and Remote Sensing, introducing new courses to suit national needs. This proposal introduces a five-credit independent study module to improve writing/oral communication skills as applied to GIS and Remote Sensing.

The proposed programme includes an optional research component and at the end of the course work, the students will have the option whether to obtain one year Masters degree or continue with another one-year research project (equivalent to 30 credits) selecting a suitable research topic in any of the fields mentioned above and submit a thesis. In this connection, the students are free to select an institution of their choice to conduct the research study. The Postgraduate Institute of Science would also help the students to find suitable institutions and topics for their research.

This Masters programme will thus prepare the candidate to take the challenge of meeting not only national needs in diverse areas as stated above, but also to continue toward a higher degree anywhere in the world.
2. AIMS AND OBJECTIVES

This programme aims at developing human resources in the fields of GIS and Remote Sensing. The objectives of the programme are;

1. To train personnel in the fields of remote Sensing and Geographic Information Systems and the related aspects at postgraduate level.
2. To provide an opportunity to improve existing skills in GIS and Remote Sensing.
3. To provide a necessary background knowledge for research in Remote Sensing and GIS applications.
4. To provide necessary skills for use of GIS and Remote Sensing in management of natural resources.

3. PROGRAMME ELIGIBILITY

This programme is designed to suit professionals and young graduates who do not have any previous experience in the use of GIS or Remote Sensing. Candidates should have a strong background in at least one of the following subject areas: Computer science, Physical and Biological Sciences, Earth and Natural Sciences, Geography, Agriculture, Surveying, Engineering, Medicine or any other discipline that will be endorsed by the Board of Study in Earth Sciences of the PGIS.

The candidates who are employed and eligible for admission need to produce evidence of leave granted to follow the programme and a letter of release from the relevant Head of the Department/Institution.

4. PROGRAMME FEE

(N.B. The programme fees given below may be revised.)

Students registered for the Master of GIS and Remote Sensing degree programme shall pay the Programme fee in full or in two (1/2 at the registration and the balance at the end of the first semester) installments. An additional payment of Rs. 30,000/- (or Rs. 60,000/- from foreign students) should be made at the end of the first year to continue for the M.Sc. in GIS and Remote Sensing degree programme. Other payments including registration fee, medical fee, library subscription, examination fee and deposits (science and library) should be paid according to the procedure stipulated by the PGIS.
5. THE PROGRAMME STRUCTURE AND DURATION

This programme consists of three options for completion.

5.1 Masters Degree by Course Work (SLQF Level 9)

The Master of GIS and Remote Sensing degree can be obtained by completing course work only (without conducting any research project).

Course work, comprising of theory courses, and laboratory and/or fieldwork, shall be conducted over a period of two semesters of 15 weeks each. The total duration of the degree, including examinations, shall be about 12 months. Satisfactory completion of a minimum of 30 credits of course work with a GPA of not less than 3.00 is required for the successful completion of the degree - SLQF Level 9 (Students who do not satisfy the above criteria but obtain a GPA in the range 2.75 to 2.99 for course work of 25 credits are eligible for the Postgraduate Diploma in GIS & RS - SLQF Level 8, and those who obtain a GPA in the range 2.75 to 2.99 for course work of 20 credits are eligible for Postgraduate Certificate - SLQF Level 7).

5.2 Masters Degree (SLQF Level 10)

In addition to Masters Degree with course work (5.1), the Masters Degree (Research) requires a research project. The duration of the entire programme shall be 24 months inclusive of 5.1. Completion of all the requirements of 5.1 with a GPA of not less than 3.00 is a prerequisite for the Masters Degree (Research). The research project for this degree should be conducted on full-time basis, and completed during the second year. The research component is allocated 30 credits, totalling 60 credits for the entire programme. After successful completion of the research project, the student shall be eligible for the award of the M.Sc. in GIS and Remote Sensing degree - SLQF Level 10 (Students who do not complete the research project within the stipulated time period shall be awarded the Master of GIS and Remote Sensing degree - SLQF Level 9).

5.3 Extension of the programme for M.Phil. (SLQF Level 11) or Ph.D. (SLQF Level 12)

After conducting research for a period of six months in the M.Sc. degree (research) programme, students who have demonstrated exceptional progress may apply for upgrading the degree status to M.Phil. The student should continue the research project and any additional research work/assignments recommended by the PGIS for a total of two years (60 credits of research) to qualify for the award of the M.Phil. degree (SLQF Level 11).

During the second year of research, students who have demonstrated exceptional and continuous progress may apply for upgrading the degree status from M.Phil. to Ph.D. The student should continue the research project and any additional research work/assignments recommended by the PGIS for another year on full-time basis (additional 30 credits) to qualify for the award of the Ph.D. degree (SLQF Level 12).
Master of GIS and Remote Sensing Degree Programme (SLQF Level 9)
Master of Science (M.Sc.) in GIS and Remote Sensing Degree Programme
(SLQF Level 10)

| **Aims** | Aims: The overall aim is to familiarize the student with concepts and methods involved in scientific research  
**Specific aims:**  
1. To explain the scientific process in the conduct of research.  
2. To develop skills to write a review paper and a scientific research proposal.  
3. To develop skills to make a presentation.  
4. To master the application of statistical methods on quantitative scientific data. |
| **Intended learning outcomes** | At the end of the successful completion of the course, students will be able to,  
1. Describe the scientific method.  
2. Conduct an independent review of literature on a selected topic in the area of GIS, Remote Sensing and/or GPS.  
3. Write a formal scientific report conforming to the guidelines provided.  
4. Transfer the knowledge gained through (2) and (3) above in the form of a presentation.  
5. Complete a research proposal conforming to the guidelines provided.  
6. Perform statistical analysis of quantitative data. |
| **Content** | Review paper: Review of literature; Development of the review paper in concise and professional manner and logical presentation of results that have been reported, writing the abstract, compilation of the list of references.  
Proposal writing: Interpretation and critical evaluation of results of published research; Formulation of a research problem: Concise literature review, justification, time frame, identification of resources, budgeting, etc.  
Project: Collection and statistical analysis of data on a topic associated with the review paper.  
Seminar: Presentation of literature and data collected on a given topic; Preparation of an abstract, preparation of slides. |
| **Assessment criteria** |  
| Continuous assessment | End-semster examination |
| 30% |  
Review paper | 25%  
Proposal writing | 10%  
Project | 25%  
Seminar | 10% |

<tr>
<td>Aims</td>
<td>Aims: The overall aim is to prepare the student to conduct a research independently. Specific aims: 1. To train students to apply scientific method in scientific research. 2. To train students to generate researchable hypotheses. 3. To train students to plan, design and conduct scientific research. 4. To gather reliable scientific data, analyse, and interpret. 5. To develop skills in scientific writing.</td>
</tr>
<tr>
<td>Intended learning outcomes</td>
<td>At the end of the successful completion of the course, students will be able to, 1. Apply the scientific method. 2. Design a research project. 3. Complete a research project. 4. Describe ethical issues in scientific research. 5. Explain the patenting process in research. 6. Make presentations at national/international conferences. 7. Produce a thesis conforming to the requirements of the PGIS. 8. Write manuscripts for publication in refereed journals.</td>
</tr>
<tr>
<td>Content</td>
<td>The students will conduct sufficient amount of laboratory/field work on a chosen research topic under the guidance provided by an assigned supervisor/s, make a presentation of research findings at a national/international conference, and produce a thesis.</td>

Recommended Texts:
Contents of other courses:

ESR 501: Fundamentals of Geographic Information Systems (GIS) (3 Credits)

Course Outline
Introduction to GIS, Definition, Overview, History and Concepts of GIS, Scope and Application areas, Purpose and Benefits of GIS, Functional elements of GIS, Required hardware and software for GIS, Required functions of GIS software, Installation of GIS, Mapping Concept – Map Elements, Map scales and representations, Map Projection, Geometric rectification, Data Structure – raster and Vector Data Structures, Input of geospatial data, Sources of data and input devices, Spatial database – concept of spatial database, Data Acquisition and Management Techniques, Data Manipulation and Analysis, Map Output Generation.

Laboratory Sessions
Spatial database development, Data input, Linking non-spatial and spatial database, database editing and updating, GPS data integration in GIS, Data manipulation and preprocessing, Spatial analysis, Map generation, Charting and tabular representation. Mini-project for GIS application.

ESR 502: Remote Sensing and Aerial Photography (3 Credits)

Course Outline
Overview and concepts of Remote Sensing technology, basics of photogrammetry, practical uses of aerial photographs/satellite photographs in various disciplines, fundamental characteristics of electromagnetic radiation, interaction of radiation with matter refraction, absorption, diffusion, emission with radiometric terms and units, concepts of spectral resolution and detection, Remote Sensing platforms, Satellite System and sensors, active and passive sensing systems, visual-digital interpretation, overview of RS Applications, Introduction to RS image processing. Image enhancement. geometric correction. RS Image classification.

Laboratory Sessions
Visual interpretation of aerial photographs for land use, land pattern analysis, geological and structural analysis as well as manipulation and analysis of remote sensing images.

Text Books and References:

ESR 503: Database Management Systems (2 Credits)

Course Outline
Introduction to databases, database management systems, hierachical model, relational database, principles and technologies of object-oriented programming, object oriented database, Concept of spatial database, design of spatial database.

ESR 504: GPS and its Applications (2 Credits)

Course Outline

Laboratory Sessions
Hands on sessions with GPS equipments, Real-life case studies, location of a ground point with different coordinate systems, navigation, GPS survey, Electronic data downloading, conversion of GPS data to GIS.

**ESR 505: Fundamentals of Space Technology** (2 Credits)

**Course Outline**

**ESR 506: Advanced Technologies in GIS** (3 Credits)

**Course Outline**

**Laboratory sessions**
Database import and export using SQL, Statistical analysis, Regression analysis of spatial data, Advance data analysis, 3D modeling in GIS, Map algebra and cartographic modeling, Hotlinking, Automation and customization, Programming in GIS, Internet GIS.

**ESR 507: Advanced Mapping Technology** (2 Credits)

**Course Outline**

**Laboratory Sessions**

**ESR 508: Digital Photogrammetry** (2 Credits)

**Course Outline**

**ESR 509: Spatial Analysis and Modeling** (2 Credits)

**Course Outline**
Use of GIS in attribute and spatial queries, single and multilayer operations, geometric modeling, point pattern analysis, reclassification and coverage building, surface analysis, raster grid analysis, various types of overlay operations and spatial operations in GIS, Buffer analysis, fuzzy spatial analysis, Basic geostatistical components for spatial analysis, proximity analysis, connectivity analysis, diffusion modeling, establishment of objectives and criteria for analysis, data preparation for spatial operations, evaluation and interpretation of results.

**ESR 510: Application and Development of GIS and Remote Sensing** (3 Credits)

**Course Outline**
Application of GIS in Cartography and map making, geological mapping, Natural resources exploration and management, Environmental planning and management, Disaster management, environmental impact assessment, Geological and Hydrological modeling, coastal zone management, Irrigation system management, Agricultural planning and development, Forestry management, fishery and marine applications, Coastal zone management, Epidemics and Disaster Management and mitigation, Archeology, Planning and management of Transport networks, Telecommunication tower networks, Water supply and distribution networks, Electrical distribution networks, Navigation system development, GIS for business planning and managements etc.

Students are requested to compile a mini project report on the application of GIS in any selected discipline.

**ESR 511: Digital Image Processing in Remote Sensing** (2 credits)

**Course Outline**

**Laboratory Sessions**

**ESR 512: Geostatistics in GIS** (3 credits)

**Course Outline**
Methods of statistical learning theory, spatial statistics, and modeling, mapping distances, allocation, shortest path, accumulation surfaces, interpolating to Raster, terrain analysis, spatial prediction and risk analysis, spatial sampling and monitoring network design etc., Interfaces between geo-statistics and GIS, integration of geostatistics and GIS, mutual benefits, statistical problems of error propagation and uncertainty in GIS, etc., Application of geostatistical methods in the Earth and Environmental Sciences, in Agriculture and Forestry, Epidemiology and Health Sciences, Econometrics and Telecommunications, Interfaces between (geo-) statistical software systems, spatial database management systems and visualization and mapping software systems.

**ESR 513: Application and Development of Web GIS** (2 Credits)

**Course Outline**

**Laboratory Sessions**
The Laboratory session will provide hands on experience on using OSS for developing, managing and serving spatial and geo-referenced multimedia contents on the Web.
ESR 514: Numerical Methods and Algorithms in RS and GIS (2 Credits)

Course Outline

7. PROGRAMME EVALUATION

Evaluation of Course work

Based on the scheme given below, the overall performance of a student in a given course shall be evaluated by the respective instructor(s) and a grade shall be assigned.

Evaluation Scheme
- For all courses a minimum of 80% attendance is expected.
- The evaluation of each course (except independent study and research project) shall be based on within course and end of course examinations, and assignments. The weightage of marks given below can generally be used as a guideline in the computation of the final grade, except for Independent Study and Research Project.
  End of course examination 50 - 60%
  Continuous assessments (mid-semester examination, assignments, etc.) 40 - 50%
- Courses with laboratory and/or fieldwork shall be evaluated, where applicable, on a continuous assessment basis.
- The minimum grade a student should achieve to pass a course is C.
- Students will be informed of the evaluation scheme by the instructor at the beginning of a given course.

Grade Points and Grade Point Average (GPA)
The Grade Point Average (GPA) will be computed using the grades earned for core courses and optional courses, taken for credit.

On completion of the end of course examination, the instructor(s) is/are required to hand over the grades of a given course to the programme coordinator who will assign the Grade Points using the following table:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Grade Point</th>
</tr>
</thead>
<tbody>
<tr>
<td>A+</td>
<td>4.0</td>
</tr>
<tr>
<td>A</td>
<td>4.0</td>
</tr>
<tr>
<td>A'</td>
<td>3.7</td>
</tr>
<tr>
<td>B+</td>
<td>3.3</td>
</tr>
<tr>
<td>B</td>
<td>3.0</td>
</tr>
<tr>
<td>B'</td>
<td>2.7</td>
</tr>
<tr>
<td>C+</td>
<td>2.3</td>
</tr>
<tr>
<td>C</td>
<td>2.0</td>
</tr>
</tbody>
</table>
The Grade Point Average (GPA) will be computed using the formula:

\[ \text{GPA} = \frac{\sum c_i g_i}{\sum c_i}, \]

where \( c_i \) = number of credit units for the \( i^{th} \) course, and \( g_i \) = grade point for the \( i^{th} \) course

**Make-up Examinations**

‘Make-up’ examinations may be given only to students who fail to sit a particular examination due to medical or other valid reasons acceptable to the PGIS.

**Repeat Courses**

If a student fails a course or wishes to improve his/her previous grade in a course, he/she shall repeat the course and course examinations at the next available opportunity. However, he/she may be exempted from repeating the course, and repeat only the course examinations if recommended by the teacher-in-charge or M.Sc. Programme Coordinator. The student may repeat the same course or a substituted (new) optional course in place of the original course. A student is allowed to repeat five credits of coursework free-of-charge. The maximum number of credits a candidate is allowed to repeat is fifteen. The maximum grade, a candidate could obtain at a repeat attempt is a B and he/she is allowed to repeat a given course only on two subsequent occasions.

**Evaluation of Research Project**

Research project will be evaluated on the basis of a written report (M.Sc. Thesis) and oral presentation (see Section 6.0 of the PGIS Handbook for the format of the Thesis).

8. **TEACHING PANEL (NEED TO BE UPDATED)**

Dr. S.P. Abey sundara, Senior Lecturer, Dept. of Statistics & Computer Sciences University of Peradeniya  
*B.Sc. (Peradeniya), PhD (Texas)*

Dr. H.H.P.K. Abeyesundara Dept. of Statistics & Computer Sciences, University of Peradeniya  
*B.Sc. (Peradeniya), PhD (Texas)*

Dr. TWMTW Bandara Senior Lecturer, Dept. of Geography, University of Peradeniya  
*B.A. (Peradeniya), MPhil (Norway), PhD (Madras)*

Mr. S.D.P.J. Dampe gama, Institute of Surveying and Mapping, Diyatalawa  
*B.Sc.(Kelaniya), MSc (USA).*

Dr. Jayalath Ediris inghe, Department of Civil Engineering, University of Peradeniya  
*B.Sc. (Perad.), M.Sc. (Ehime), PhD (Ehime)*

Dr. E.P.S.K. Ediriweera, Dept. of Science & Technology, Uwa Wellassa University, Badulla  
*B.Sc. (Peradeniya), PhD (UK)*

Dr. Jagath Gunatilake, Department of Geology, University of Peradeniya  
*B.Sc. (Perad.), M.Sc. (AIT), PhD (Saga)*

Mr. Malika Gunawardena Department of Geology, University of Peradeniya  
*B.Sc. (Peradeniya), MSc(Peradeniya)*

Dr. S.W. Nawarathna, Department of Geology, University of Peradeniya  
*B.Sc. (Perad.), M.Sc. (Canada), PG Dip (Austria), PhD (Austria)*

Dr. U.H.G.R.D. Nawarathna, Lecturer, Dept. of Statistics & Computer Sciences, University of Peradeniya  
*B.Sc, (Peradeniya), PhD (Texas)*

Dr. Lal Samarakoon, Director, GIS Application Center, AIT, Bangkok, Thailand
B.Sc (Kelaniya), M.Sc. (Saga), PhD (Ehime)
Dr. Amara Satarasinghe, Director, Dept. of Census and Statistics, Colombo
BSc., MSc., PhD (Perad.)
Mr. S. Sivanantharajah, Senior Suprintendant of Survey, Survey Department, Colombo
B.Sc. (Perad.), MSc  (ITC- The Netherlands)
Dr. Nitin K. Tripathi, Asian Institute of Technology, Bangkok
B.Tech (IIT), M.Tech (IIT), PhD (IIT)
Dr. Udaya W.A. Vitharana, Head/Department of Soil Science, Faculty of Agriculture,
University of Peradeniya
B.Sc. (Peradeniya), PhD (UK)
Prof. P. Wickramagamage, Department of Geography, University of Peradeniya
B.A. (Perad.), PhD (UK)
